**DETAILED ACTION**  
**Restriction/Election Requirement**

1. Applicants' response filed 10/19/09 to the restriction requirement mailed 7/27/09 is acknowledged.

However, upon further consideration, the following restriction is also required under 35 U.S.C. 121 and 372. The applicant is encouraged to contact the undersigned examiner should there be any question regarding this supplemental restriction requirement.

2. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

I. Claims 1, 117-166, and 170-174, drawn to a method for constructing a variant set for modifying a biopolymer of interest and a computer program product for performing the method.

II. Claims 167-169, drawn to a nucleic acid sequence or a cell comprising the same.

3. The inventions listed as Groups I-II do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reason:

4. The inventions of the groups I-II are distinct and lack unity because they don't share the same special technical feature.

It appears that the only technical feature linking the groups are the nucleic acid sequence claimed in group II. However, the sequence is drawn to a sequence “comprising nucleic sequences encoding all or a portion of the variants in the new variant set of step e) of claim 117.” The term “a portion” is interpreted as reading on any length of a nucleic acid including a single nucleotide. Thus the sequence claimed in group II reads on any nucleic acid sequence known in the prior art, and such nucleic acid renders claim 167, among the other, not novel. Therefore, the technical feature of the polynucleotide sequence is not special and the groups are not so linked under PCT Rule 13.1.

5. Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

(a) the inventions have acquired a separate status in the art in view of their different classification;

(b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;

(c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);

(d) the prior art applicable to one invention would not likely be applicable to another invention;

(e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

**Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.**

Te election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
